

You're protecting your customers, but Who's Protecting You?

SaaS Alerts is built to seamlessly integrate with the best of breed tools that MSPs use most. Explore our growing list of integrations below.

SaaS Alerts is the only software that monitors these MSP Tools for free:

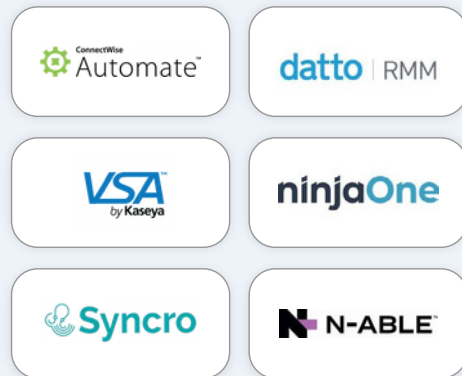

Documentation Integrations

Protect the literal keys to the castle by integrating SaaS Alerts with your documentation system to monitor for any unusual user behavior that might indicate a security risk.

RMM Integrations

Reconcile device data from your RMM with user data from SaaS Alerts to help ensure only authorized users on authorized devices can gain access to critical company SaaS applications.

PSA Integrations

Integrate SaaS Alerts with your existing PSA tools and workflows to efficiently surface security issues to your technicians. Alerts are automatically created in your PSA tool, allowing for fast and comprehensive response to potential security issues.
