

Let Us Manage SaaS Alerts for You

With our Managed SaaS Alerts offering, we'll monitor, analyze and respond to threats identified within your SaaS Alerts platform — giving you peace of mind that your SaaS is Covered.

KEY FEATURES

CUSTOMIZED PLATFORM CONFIGURATION

We'll properly configure your SaaS Alerts platform based on your specific requirements and security commitments, including Fortify, Unify, Respond and Reporting.

24/7/365 MONITORING

Our dedicated team continuously monitors security events from various sources within the platform, including SaaS Alerts' proprietary software and databases.

INCIDENT ANALYSIS AND TRIAGE

Our experts analyze security incidents, conduct initial triage, and escalate them to your MSP team for swift resolution.

PROACTIVE SECURITY ENHANCEMENTS

Our Cloud Detection Center (CDC) team will implement new SaaS Alerts functionality when released to enhance your security posture and that of your customers.

COMPREHENSIVE MONTHLY REPORTING

You'll receive detailed monthly reports highlighting any significant changes to your SaaS Alerts configuration and any actions that were taken to mitigate or eliminate threats.

COLLABORATION AND COMMUNICATION

SEAMLESS INTEGRATION WITH YOUR SECURITY TEAM

We work hand-in-hand with your security team to prevent cloud threats from impacting your customers' operations.

CLEAR INCIDENT DOCUMENTATION

Our analysts document and report incidents and resolutions clearly and concisely, enabling effective communication with your customers.

SHARING BEST PRACTICES

Benefit from our expertise. We share best practices with your team to ensure your security posture remains robust and up-to-date.

Secure your customers' cloud environments with Managed SaaS Alerts. Let us manage your SaaS security, so you can focus on what you do best — delivering superior customer service.
